

Homework Submission CPSC 475/BENG 475

Instructions

You are required to do the homework in MATLAB and all the answers should be placed in an m-file. The teaching staff will grade the homework based on the html file they will generate from your m-file by using the MATLAB function *publish*.

- Use the provided `HW_sample.m` file as a template to learn how to produce a nice document from your m-file.
- You can also *publish* the MATLAB tutorial script that was uploaded to Canvas to see what it looks like when *published*.
- Check out [this page](#) for more info.
- Another way to read the docs is by typing `doc publish` directly from MATLAB's command line.
- The bare minimum: use `%%` to specify the question you are going to solve. Use `%` to add your solutions or comments to the questions.
- After writing the m-file, please make sure that the *publish* function works properly and that the resulting html file looks good. *Be careful not to have points deducted due to unreadable submissions!*
- Submit the m-file and all the other files which are necessary for *publishing*. Do NOT submit the html file.
- Name your m-file `homework_answer.m`
- Pack everything into a zip file and upload your work to Canvas.
- Homework is due at 11:59 pm on the due date, with a 2-hour grace period. No late submissions will be accepted.
