

**Assumptions:**

I'm assuming that this is for a liability program of something like that - otherwise there would be a whole lot more information on the transplants, hospitals and organ banks.

**Rational for "Address Lines":**

Simple way to allow easy internationalizations compared to an "Address" compound attribute with "street", "state", and "ZIP code" fields. This isn't too important for hospitals, but there are people who fly in from out of the country to get treated.
